The term space station covers a number of large orbital installations whose roles include commercial and military shipyards, Adeptus Mechanicus research facilities, Naval command bases and stations built purely for habitation. The largest are capable of handling several large military capital ships at once, although most can only cope with a single cruiser or squadron of escorts at any one time. Most shipyards are controlled by the Imperial Navy or Adeptus Mechanicus, although a few worlds in the Gothic Sector, such as Luxor and Verstap, operate independent space stations under ancient contract to Port Maw. Space stations are sizeable and well armed, capable of fending for themselves against small raiding fleets and bear the brunt of much of the fighting in a system. In the Gothic War control of space stations capable of re-supplying and re-fitting warships was of paramount importance and they became the focal point for many battles. The Chrysalis shipyards at Arimaspia were fought over eighteen times between 150-153.M41, including a battle through its corridors and factories between traitor Marines and Naval personnel which lasted for over three weeks.
