TYPE/HITS	SPEED	TURNS	SHIELDS	ARMOUR	TURRETS
Ground/1	0	0	0	6+	2
ARMAMENT	RANGE/SPEED		FIREPOWER/STR		FIRE ARC
Launch bays	Fighters: 30 cm Bombers: 20 cm		4 squadrons		–

Many fighters and bombers are designed to operate in a planet's atmosphere as well as in space. From surface airstrips and underground launch bays, these attack craft can fly up from the planet to attack ships which take up a low orbit or intercept incoming bombers and torpedoes directed towards ground-based targets.

DEFENCE LASER SILO

15 PTS

TYPE/HITS	SPEED	TURNS	SHIELDS	ARMOUR	TURRETS
Ground/1	0	0	0	6+	0
ARMAMENT	RANGE/SPEED		FIREPOWER/STR		FIRE ARC
Lance battery	60 cm		3		Front

These huge installations house several massive laser weapons that fire hundreds of miles out of the planet's atmosphere. Planet-based lasers require even more power than ship lances, to compensate for the unavoidable defraction of the energy beam caused by firing through the atmosphere. The bulk of the silo is normally built underground, adding the protection of hundreds of feet of rock to the metres-thick walls of the silo itself.

MISSILE SILO

5 PTS

TYPE/HITS	SPEED	TURNS	SHIELDS	ARMOUR	TURRETS
Ground/1	0	0	0	6+	0
ARMAMENT	RANGE/SPEED		FIREPOWER/STR		FIRE ARC
Torpedoes	30 cm		6		Front

There are many different types of ground-based missile defence systems. Some are simply one-shot launch tubes dug into the planet's surface, relying on the missiles' own mechanical brain to locate and move towards targets in orbit. Others are mobile launchers, which can be moved about on the planet's surface to provide orbital defence for armies on the ground, often using their own long-range surveyors to detect approaching ships and guide their huge payloads to the target.
