Operations by the Kir'Qath “Defender” starship revealed that while it was a capable escort, continuing shortcomings in its engineering plant required a new vessel design that could make much deeper and longer dives as well as a larger number of dives before requiring to recharge its primary drives. Like the other vessels designed during the Kor’or’veesh initiative, its unique hull design allows for considerably longer-range operations compared to its predecessor. Deployed in the role of traditional escort vessel, it has proven directly comparable to commonly encountered Imperial designs. Around Taros the Tau fleet deployed Castellans in large numbers in support of their larger vessels with great success.
